

Manufacturer's declaration

Mixing of Solarwatt PV modules

All SOLARWATT solar modules and the materials used for them have been carefully selected. We ensure that the solar modules meet all necessary requirements, such as IEC 61215 and 61730. In addition, we test our solar modules even more extensively and undertake a wide range of sustainability efforts to always guarantee Solarwatt's premium quality.

The company
Solarwatt GmbH
Maria-Reiche-Straße 2a
01109 Dresden

hereby declares that the following PV modules can be mixed together within one PV string:

- SOLARWATT Panel vision XS 5.0
- SOLARWATT Panel vision M 5.0

These modules are electrically matched to each other in such a way that mixing in one string is possible. The module performance of the respective modules adds up, as is the case with a conventional string assignment with only one module type.

Products from other manufacturers may not be combined with the above modules.

Please always follow the corresponding installation instructions and the specifications of the peripheral devices, such as the instructions for the inverter.
